DIGITAL LITERACY PROJECT REPORT

Submitted By: NIVETAA T

Registration Number: 25BAI10145

Course: Digital Literacy

Course Code: CSE0001

Institution: VIT Bhopal University

Submission Dates: 31 March 2026

INTRODUCTION

The Student Digital Ambassador is the core of this project, and the project is all about teaching students about digital literacy. Digital literacy is the key skill in the current world, and it empowers individuals to use technology in a safe, efficient, and responsible manner. In this project, I have learned different aspects of digital literacy, like online safety, professional online presence, communication etiquette, and cybercrime awareness.

The project consists of five tasks, which each target a separate aspect of digital literacy. The tasks enabled me to acquire practical experience through my creation of an infographic and my development of a digital portfolio and my research of online platforms and my composition of professional emails and my study of cybercrime scenarios. The UPI fraud scenario demonstrates how users can experience fraud when they share their personal information without awareness, which shows why people need to take precautions during their online transactions. The project provided me with better digital world understanding through its content which taught me responsible online behaviour and effective digital world navigation skills.

TASK 1: Digital Literacy Awareness Infographic

I created a Digital Literacy Awareness infographic to illustrate to the students the importance of digital literacy in everyday life. It includes basic concepts that cover the meaning of digital literacy, safe usage of the Internet, being professional online, and how students make use of digital technologies. Digital literacy is the ability to effectively and safely use digital technologies. It also includes basic security concepts that cover how to make secure passwords, avoid harmful links, and keep personal details secure.

The infographic was created using Canva, which is an online tool that helps in the creation of content that looks good and remains well organized.

The assignment has taught me the ability to communicate ideas through the use of visual designs, and this has helped me understand the balance between art and communication. I loved creating the infographic and learning how to structure the content in a way that looks well organized. This assignment has helped me create digital content that demonstrates my creativity and the importance of digital awareness and communication.

TASK 2: Digital Portfolio

I have created my online presence by using a simple portfolio approach. GitHub, LinkedIn, and Stack Overflow are the three main platforms that I have used for this purpose. These three platforms are hubs for professional networking.

I have kept my GitHub projects organized and easy to navigate for others. I have also written a README for my GitHub profile that provides details about myself and my educational goals. I have also extended my professional networking by providing details about my educational background and personal details in my LinkedIn profile. Stack Overflow is also a hub for people who are interested in programming and debugging.

I have an online presence due to my line of work, as it requires me to maintain an online image. I have learned that recruiters often check my online image before hiring me. I will continue updating my online profile in the next four years by sharing my projects and actively participating in online discussions. This strategy will help me in my future as it will allow me to improve my skills while gaining practical experience.

TASK 3: Coding & Collaboration

I conducted my research using coding platforms and collaboration tools to develop my digital skills. I solved fundamental programming problems on Hacker Rank which I selected as my coding platform because it is designed for beginner users. The program helped me develop my coding skills through combined training which increased my ability to think logically and solve problems.

For the collaboration section, I created a quiz using Google Forms titled "Digital Literacy Awareness Quiz." The quiz is composed of five questions that measure students' knowledge of digital literacy. The quiz is in an interesting mix of question types: multiple-choice and short-answer questions.

With Google Forms, I was able to collect responses and view them in a linked Google Sheets document, which made it easy to organize the data. It also allows the user to better comprehend their responses and identify patterns.

The task has also demonstrated to me how digital tools can help in academic work, for example, in conducting quizzes and surveys, and gathering feedback. The digital tools will be helpful for my academic work and for collaborative work in the near future.

TASK 4: Professional Email & Etiquettes

In addition, digital communication plays a critical role in both learning and work. If the message sent does not get across properly, misunderstandings occur, and this leads to confusion and the creation of a wrong impression about the sender. For example, a student who sends a message without a subject line, greeting, and polite language may be viewed as unprofessional and may not get a response. Errors in our presentation may have a negative effect on our professional relationships with professors and colleagues.

These cases can be avoided by observing good etiquette in writing an email. A well-structured email has two main aspects, which are the subject line where the main idea is clearly expressed and the greeting where respect for the recipient is shown. The message should have a polite and professional tone throughout. The communication will also improve if the message is ended with an appropriate closing.

Through this task, I have learned that short and respectful emails are the foundation of communication. I have learned the technique of writing emails where my professional point can be conveyed. This skill will be useful for me when communicating with teachers and classmates in academic discussions and when communicating professionally.

Task 5: Cybercrime Case Study & Prevention

During my research on UPI scams, I discovered that anyone can fall prey to scammers through simple tricks. The scam techniques used include false telephone calls, false text messages, and QR codes. The scammers pretend to be bank employees or merchants and trick people into revealing sensitive information and making payments. I also discovered that many people are unaware that UPI PIN is only used for sending money and not for receiving money.

Digital wallets and online payment apps require a high degree of vigilance. This has been one of the key learnings for me in dealing with this kind of task. I have set a personal rule for myself that I will ensure that I check every payment request using proper means before taking any action. I will ensure that my online activities are focused on providing proper safety and security by not clicking on any unknown link, scanning unknown QR codes, and answering unknown phone calls. I will ensure that I keep my UPI PIN and OTP safe and do not disclose them to anyone.

I think I have an idea of how cybercrime operates with the help of this assignment. It also made me realize the significance of being cautious online. I learned how to utilize online tools properly and how to remain vigilant when I'm online.

CONCLUSION

This project demonstrated the importance of digital literacy in the world we are living in. As technology becomes more and more a part of our daily lives, it is essential for everyone to understand how to use it in a safe and efficient manner. As I went through the different tasks, I learned about safe internet usage, how to create a professional image online, and how to communicate online in a clear and efficient manner, as well as the importance of being aware of cybercrimes like UPI fraud and how to avoid them.

The tasks also gave me genuine professional training and exposure. The infographic helped me learn to effectively communicate visually. The digital portfolio helped me understand the importance of having a decent online presence. The exploration and quizzes helped me develop my technical and analytical skills. The professional email and cybercrime helped me develop my communication and knowledge of cybercrime.

The project has provided me with the key skills to improve my use of digital technology and now I am more confident in my use of digital technology. The project has helped me to gain skills that I can use for my academic and professional life in the future. I am planning to use the skills I gained from this experience to be a better digital citizen.
